"A 104-kDa disaylglycerol kinase containing ankyrin-like repeats
"A 104-kDa disaylglycerol kinase containing ankyrin-like repeats
localizes in the cell nucleus.";

Proc. Natl. Acad. Sci. U.S.A. 93:11196-11201(1996).

-!- FUNCTION: Displays a strong preference for 1,2-diacylglycerols
over 1,3-diacylglycerols, but lacks substrate specificity among
molecular species of long chain diacylglycerols.

-!- CATALYTIC ACTIVITY: ATP + 1,2-diacylglycerol = ADP + 1,2-
diacylglycerol 3-phosphate.
-!- SUBMNT: Interacts with the PDZ domain of the syntrophin SNTG1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rattus norvegicus (Rat).

ISSUE SPECIFICITY: Highest levels in brain, and substantial

levels in skeletal muscle, heart, and pancreas.

PIM: Phosphorylation of the MARKS homology domain by PKC reduces

nuclear accumulation of DGK-zeta.

SIMILARITY: Belongs to the eukaryotic diacylglycerol kinase
 SUBUNIT: Interacts with the PDZ domain of the syntrophin SNTG1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PROSITE; PS50089; ANK REPEAT; 2.

                                                                                                                                                                                                                                family.
SIMILARITY: Contains 2 ANK repeats.
SIMILARITY: Contains 2 zinc-dependent phorbol-ester and DAG binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KRRFPGLRLFGHR (in isoform Short).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

Sequence 6251, Application US/09513999C
; Sequence 6251, Application US/09513999C
; Patent No. 6783961
; GENERAL IMFORMATION:
; APPLICANT: Dumas Milne Edwards, J.B.
; APPLICANT: Duclert, A.Y.
; APPLICANT: Giordano, J.Y.
; TILE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
; Patent No. 6783961
; FILE REPERBNCE: 59.US2.REG
; CURRENT APPLICATION NUMBER: US/09/513,999C
; CURRENT FILING DATE: 1999-02-26
; RIOR FILING DATE: 1999-02-26
; NUMBER: OF SEQ ID NOS: 36681
; SEQ ID NO 6251

US-09-552-991A-31724, Application US/09252991A

Facence 31724, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: MUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: ARROGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

FEMALE APPLICATION NUMBER: US 60/094,150

FRIOR FILING DATE: 1998-07-27

FRIOR FILING DATE: 1998-07-27

Patent No. 6673897

GENERAL INFORMATION:

APPLICANT: VLAAMS INTERUNIVERSITAIR INSTITUUT VOOR BIOTECHNOL

TITLE OF INVERTION: NOVEL INHIBITORS OF NF-KappaB ACTIVATION

FILE REPERENCE: 2676-4554US

CURRENT FILING DATE: 2000-10-31

PRIOR PLILCATION NUMBER: PCT/BE99/00055

PRIOR PLILCATION NUMBER: 9201472.2

PRIOR PLILCATION NUMBER: 98201472.2

PRIOR PLILOR DATE: 1998-05-06

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin version 3.1

SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

RESULT 2 S72639
hypothetical primary sigma factor - Thermoanaerobacterium thermosulfurigenes C.Species. Thermoanaerobacterium thermosulfurigenes
C;Date: 29-Jul-1997 #sequence_revision 29-Aug-1997 #text_change 09-Jul-2004
C;Accession: S72639

R./Matuschek, M.; Sahm, K.; Bahl, H.

submitted to the EMBL Data Library, March 1996

A.Description: Characterization of genes from Thermoanaerobacterium thermosulfurigenes EN

A.Reference number: 872635

A.Reference number: 872635

A.Accession: 572639

A.Status: preliminary

A.Molecule type: DNA

A.Residues: 1-261 < MAT>
A.Residues: 1-261 < MAT>
A.Consersion: 6726972; PIDN:AAB08043.1; PID:g154;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                              and mouse CDNA sequences.",
Proc. Natl. Acad. S21. U.S.A.
Proc. Natl. Acad. S21. U.S.A.
-!- FUNCTION: DNA-binding protein that specifically recognizes
-!- CONSENSUS SEQUENCES at the breakpoint junctions in chromosomal
translocations, mostly involving immunoglobulin (Ig)/T-cell
receptor gene segments. Seems to recognize single-stranded DNA
ends generated by staggered breaks occuring at recombination hot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

-!- FUNCTION: DNA-binding protein that specifically recognizes consensus sequences at the breakpoint junctions in chromosomal translocations, mostly involving immunoglobulin (Ig)/T-cell receptor gene segments. Seems to recognize single-stranded DNA ends generated by stagered breaks occuring at recombination hot spots (By similarity).
-!- SUBUNIT: Forms a multimeric ring-shaped structure (By similarity).
-!- SUBCELIULAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the translin family.
                                                                                                                    Gallus gallus (Chicken).

Submitted (MAK-1996) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Sigma factors are initiation factors that promote the attachment of RNA polymerase to specific initiation sites and are than released (By similarity).
-!-SIMILARITY: Belongs to the sigma-70 factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description

Batent No. 6074817
GENERAL INFORMATION:
APPLICANT: Landini, Maria P.
APPLICANT: Ripalti, Alessandro
APPLICANT: Maine, Gregory T.
TITLE OF INVENTION: RECOMBINANT MONO AND POLY ANTIGENS TO DETECT CYTOMEGALOVIRUS-S
CORRESPONDENCE ADDRESS:
ADDRESSEE: Abbott Laboratories
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
Sequence 2, Application US/08935009A
Patent No. 6177241
GENERAL INFORMATION:
APPLICANT: Maine, Gregory T.
TITLE OF INVENTION: SPECIFICITY OF AN ENZYME IMMUNOASSAY FOR
TITLE OF INVENTION: THE DETECTION OF HERPESVIRUS SPECIFIC IGM ANTIBODY
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSE: Abbott Laboratories
STREET: 100 Abbott Park Road
CITY: Abbott Park

Sequence 131584, Application US/09252991A

Patent No. 6551755

GENERAL INFORMATION:

PAPLICANT: MATE J.

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE REFERENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 366
                                                                    Sequence 24606, Application US/09252991A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1, Application US/09811045A
Patent No. US20020035080A1
GENERAL INFORMATION:
APPLICANT: Scott, Robert E.
TITLE OF INVENTION: cDNA encoding P2P proteins and use of P2P cDNA-
TITLE OF INVENTION: derived antibodies and antisense reagents
TITLE OF INVENTION: in determining the proliferative potential of
                                   1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              29.5%; Score 49.5; DB 15; Length 1242; 42.3%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alternate polyprotein - eggplant mosaic virus
NyAlternate names: RNA mucleotidyltransferase (RNA-directed); RNA replicase
NyContains: RNA-mucleotidyltransferase (EC 2.7.7.48)
Contains: RNA-directed RNA polymerase (EC 2.7.7.48)
C;Species: eggplant mosaic virus
C;Species: gegplant mosaic virus
C;Date: 30-Sep-1991 #sequence_revision 30-Sep-1991 #text_change 19-Jan-2001
C;Accession: JO012

A;Title: Nuclectide sequence of the genome of eggplant mosaic tymovirus.
A;Accession: J00102
A;Molectide sequence of the genome of eggplant mosaic tymovirus.
A;Accession: J00102
A;Molectide sequence of the genome of eggplant mosaic tymovirus.
A;Accession: J00102
A;Molectide sequence of the genome of eggplant mosaic virus RNA-directed RNA polymerase
C;Superfamily: eggplant mosaic virus RNA-directed RNA polymerase
C;Superfamily: eggplant mosaic virus RNA-directed RNA polymerase
C;Superfamily: eggplant mosaic virus motif A (P-loop)
F;955-972/Region: nucleotide-binding motif A (P-loop)
F;957-1032/Region: nucleotide-binding motif B
F;971/Binding site: ATP (Lys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        G72341

Uracil phosphoribosyltransferase - Thermotoga maritima (strain MSB8)

C;Species In-thermotoga maritima
C;Date: 11-Uun-1999 #sequence_revision 11-Uun-1999 #text_change 09-Jul-2004

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
